

Claude: Three Interfaces

Choosing the right environment for your work

NO NEED TO WORRY ABOUT

- Claude accessing files on your computer
- Claude running code or commands
- Anything persisting after you close the tab

BE THOUGHTFUL ABOUT

- Anything you paste or type leaves your computer — treat sensitive content (student records, unpublished work, personal data) as you would an email to a third party

NO NEED TO WORRY ABOUT

- Claude accessing files outside the folder you connect
- Claude acting without your awareness — the desktop app shows you what it's doing

BE THOUGHTFUL ABOUT

- Be intentional about which folder you connect — Claude can read and edit everything inside it, including sensitive files
- Code-level commands run on your actual computer — understand what you're approving

NO NEED TO WORRY ABOUT

- Claude acting without a confirmation step — Claude Code asks before running significant commands by default

BE THOUGHTFUL ABOUT

- Claude can read, write, and delete files and run terminal commands — review its plan before approving actions on important data
- Connections to outside services (Drive, GitHub, etc.) grant real access to those accounts — understand what each one reaches before enabling it
- Automated workflows that run unattended need to be designed carefully before you trust them at scale
